Dropdown Coping Installation Guide

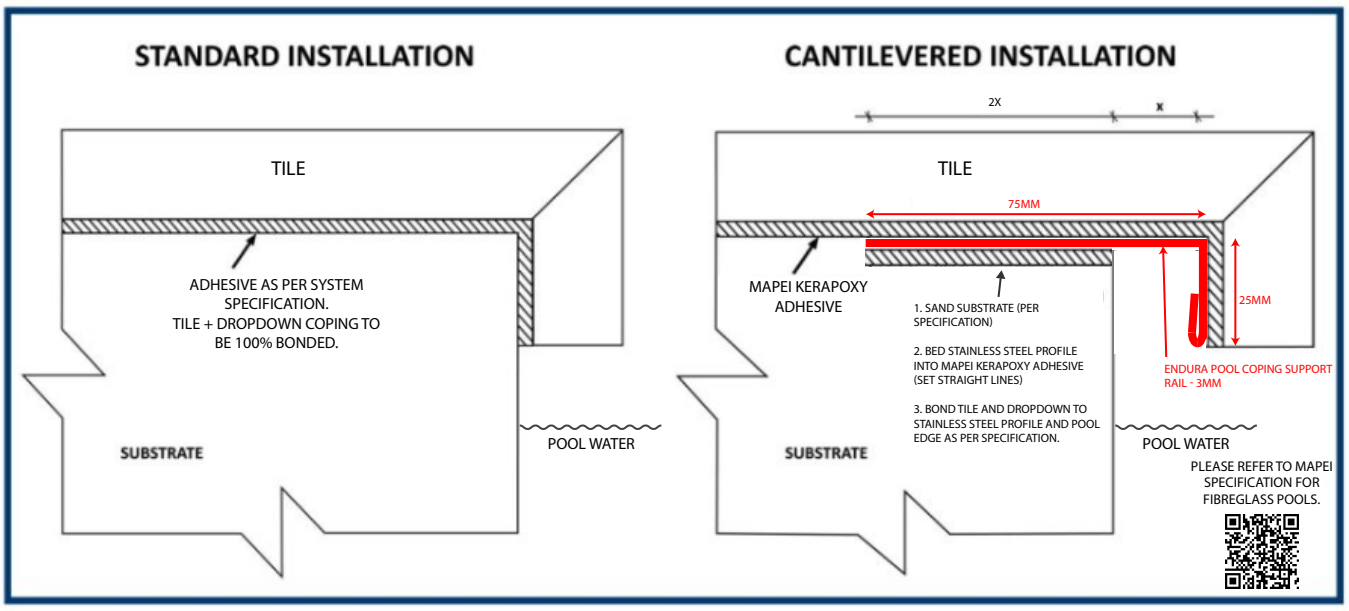

Please ensure the Dropdown Coping tiles are securely bonded to the substrate with full adhesive coverage on both the tile body and vertical drop face.

This is critical for achieving a strong bond in-line with current tiling standards and adhesive manufacturer recommendations. If the substrate is out of square or unlevel, a support profile may be needed, or an alternative product, such as a bullnose or pool edge tile, could be considered.

Please refer to the below images and links for your installation method and supplier. NB: The links are a guide. We advise requesting site specification and referring to the supplier website for up to date technical information.

MAXIMUS
PEDESTAL SYSTEMS
